Skills

HTML5, CSS3, Bootstrap, Tailwind CSS, SASS, JavaScript, ReactJS, React-Native, React-Redux, VSCode, GitBash, GitHub, Git, NodeJs, Express, JSON, MongoDB, Postman, RESTful APIs, AWS

Projects

- [Omnifood Website](#) - Developed with HTML and CSS, as a fully-responsive and beautiful site about a fictional online food-ordering-service named Omnifood.
- [NuCampsite Project](#) - Created as a full-stack site with Node/ExpressJS, React, Redux, and Reactstrap/bootstrap for styling along with custom CSS and launched to Amazon Web Services (AWS). This interactive site features a functional login/authentication system powered by json web tokens, and integrated users database with MongoDB. Demo the site with login of 'admin' and 'password' to leave comments on each campsite detail page and, marking a site as a favorite which will show on the 'favorites' page.
- [NuCamp](#) - Developed as a front-end only site using HTML/CSS with Bootstrap, and Javascript. This site features a carousel showing fictional campsites that users can reserve utilizing the reservation modal.
- [Acme Rockets](#) - A fully-responsive site designed with HTML, Tailwind CSS and Javascript. This site was created as a fictional 'rocket-ordering-service' with a cartoon flair. It also features 'dark' or 'light' mode based on your system settings.
- [Weather App](#) - Created with React/Javascript, React-bootstrap, as a single-page-application to show the user local weather information based on their zip code. This web-app pulls data from a weather api and displays the current location, current temperature, hi/low temps, humidity, and current conditions. It also manages both loading state and error states.

Work-Experience

Lifelong Nursing

Aug. 2017 - March. 2022
